

# DMXIS

Lighting Control for artists & performers

# DMXIS

## Intuitive Lighting control

### DMXIS SOFTWARE FEATURES

- Hardware style user interface is quick to learn and easy to use
- Controls any DMX-512 compatible light fixture, including classic dimmer packs, LED fixtures, and intelligent lighting (e.g. scanners & moving heads)
- Create static looks, dynamic chases & moving effects with smooth cross-fades
- Intuitive tempo-based approach, for perfect synchronisation of lighting & music
- Runs as a standalone program, VST plug-in, or Audio Unit plug-in\*\*
- Supports 512 DMX channels & unlimited number of fixtures

### HARDWARE INTERFACE FEATURES

- Outputs one DMX-512 universe (512 channels of control)
- Full microprocessor control (guarantees reliable DMX operation)
- 1500V full isolation (protects your computer)
- 3 and 5 pin DMX outputs (compatible with any DMX512 light fixture)
- Powered directly from the USB cable
- 1/4 inch stereo Footswitch input\* for easy scene switching

### APPLICATIONS

- Bands
- Bars
- DJs

Specifications:  
H53mm W115mm D85mm / H2.08in W4.5in D3.4in

\*Footswitch not included. \*\*Plug-in is an optional feature, requires a host program which supports VST or Audio Unit plug-ins.

DMXIS is the easy way to create exciting live light shows with your Mac OS X® or Windows® based computer.

Simply connect the DMXIS hardware interface to your computer, hook up your DMX-512 lighting rig, and you're ready to create stunning light shows using the intuitive DMXIS software controller.

The standalone DMXIS software program lets you use a simple footswitch\* or MIDI controller to manually control your light show from the stage.

Want full show automation, with perfect sync of audio & lighting from a single computer? No problem - the DMXIS plug-in lets you run your light show directly within your favorite audio sequencer or DJ software program!\*\*\*
