

# Littlite®

All Littlite® L-1 and L-4 series lampsets as well as G-series goosenecks utilize a BNC connector for quick attaching and detaching of the gooseneck assembly. BNC connectors are commonly used on small profile and/or mid-priced sound and lighting consoles.

The nature of the BNC connectors allows the gooseneck to rotate freely 360 degrees when fully engaged. For this reason, any Littlite® equipped with a BNC connector may rotate down on a tilted or vertical surface application.

You can minimize this by applying a piece of duct tape or heat shrink tubing from the top of the end fitting of the gooseneck to the bottom of the knurled barrel on the BNC connector. Do not let the tape or heat shrink extend to the gooseneck itself or the slotted section of the BNC connector. (See illustration).
